EXAMINER HOSSAIN, FARZANA E				
ART UNIT 2424		PAPER NUMBER		
MAIL DATE 08/17/2009		DELIVERY MODE PAPER		

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

09/870,296

Applicant(s)

NASHIDA ET AL

Examiner

FARZANA HOSSAIN

Art Unit

2424

Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 02 June 2009.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,2,4-6 and 8-11 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1,2,4-6 and 8-11 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 30 May 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/SB/C)
- 4) ☐ Interview Summary (PTO-413)
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____
- Paper No(s)/Mail Date 6/11/2009

DETAILED ACTION

Response to Amendment

1. This office action is in response to communications filed 06/02/2009. Claims 1-6, and 8-11 are pending. Claims 1, 4 and 8-11 are amended. Claims 2, 5 and 6 have been previously presented. Claims 3 and 7 are cancelled.

Response to Arguments

2. Applicant's arguments filed 01/27/2009 have been fully considered but they are not persuasive.

The applicant argues that Kuroda does not teach a) determining a malfunction in the local storage means and b) issuing a recording substitution request to an external device via a wide area network in response to determination of the malfunction in the local storage device (page 9). The applicant argues that Ellis disclose a remote media server records programs in response to record requests and does not disclose a) determining a malfunction in the local storage means and b) issuing a recording substitution request to an external device via a wide area network in response to determination of the malfunction in the local storage device (Page 9). The applicant argues that a combination would merely suggest when capacity is insufficient and

generate a warning to select another storage device and in addition indicate which program is to record (Page 9).

In response to the arguments, the examiner respectfully disagrees. Kuroda discloses determination means for determining a malfunction in the local storage means wherein the malfunction disables recording the program requested to be recorded and/or reserved on the local storage means or based on lack of storage space the storage means fails to record the program requested to be recorded and/or reserved (Column 5, lines 60-65); means for issuing a recording substitution request to an external device for recording the program via the connection means in response to the determination means determining the malfunction in the local storage means (Figure 22, Figure 7). Kuroda does not disclose that the external device is over a wide area network. Ellis discloses connection means for connecting via a wide area network with an external device which is external to the recording system (Page 6, paragraphs 0084, Page 4, paragraphs 0065, Figures 2c, 2d, 24, 20), means for issuing a recording request to the external device for recording the program via the wide network by the connection means (Page 6, paragraphs 0084-0085, Page 4, paragraphs 0065, Figures 2c, 2d, 24, 20). Kuroda discloses the recording substitution request is issued to an external device (the warning is displayed to a user but another request is issued to an external device for recording the program) (Figure 7, Figure 22) and combined with Ellis, the combination discloses that the external device can be an external device over a wide area network.

Also, the applicant did not argue the limitations for claim 4 in view of Zigmond. Zigmond discloses obtaining advertising information appropriate for a user attribute of the requesting origin from another external device or advertising source via the wide area network by the connection means (Figure 5, Figure 6, Column 7, lines 9-12, Column 11, lines 31-65, Figure 4, 62, 66, Column 9, lines 39-55) and the recording substitution means or ad insertion device (Figure 5, 80, 86, 83, 82, 81) as the ad insertion device records or stores the advertising information and substitutes or replaces advertisements in recorded programs (Column 14, lines 1-12).

3. Regarding claims 4-6 and 9, the applicant argues that Kuroda, Ellis and Zigmond do not disclose recording substitution means is configured to one of a) stores the advertising information in the storage means as an insert in a recorded program stored in the storage means in addition to original commercial information included in the recorded program and b) stores the advertising information as a substitute for the original information in the recorded program (Page 10-11). The applicant argues Zigmond does not teach storing advertising information in a storage means.

In analogous art, Zigmond discloses recording substitution portion (ad insertion device performing ad insertion via repository and switching unit) (Figure 5, Column 15, lines 24-27, 31-34) configured to one of a) stores the advertising information in the storage means as an insert in a recorded program stored in the storage means in addition to original commercial information included in the recorded program and b) stores the advertising information as a substitute (Column 15, lines 31-34) for the

original information in the recorded program stored in the storage means (Column 7, lines 10-11, 13-20, Column 15, lines 31-34, Column 14, lines 1-12). Zigmond discloses storing the advertisements in the video tape and recording the video programming feed on the video programming feed.

4. Regarding Claim 8, the applicant argues Kuroda discloses a time-shift record but does not teach a) determining a malfunction in the local storage means and b) issuing a recording substitution request to an external device via a wide area network in response to determination of the malfunction in the local storage device (Page 13).

In response to the arguments, Kuroda discloses determination means for determining a malfunction in the local storage means wherein the malfunction disables recording the program requested to be recorded and/or reserved on the local storage means or based on lack of storage space the storage means fails to record the program requested to be recorded and/or reserved (Column 5, lines 60-65); means for issuing a recording substitution request to an external device for recording the program via the connection means in response to the determination means determining the malfunction in the local storage means (Figure 22, Figure 7). Kuroda does not disclose that the external device is over a wide area network. Lawler discloses the issue portion for automatically issuing a recording request to the external storage device for recording the program via the wide network by the connection means (Column 12, lines 29-31, 58-61, Column 13, 8-12, 26-36).

Furthermore, if the applicant still disagrees that the issuing a recording substitution request to an external device is not in response to a negative result output and believes that the issuing is manual, then see *In re Venner*, 262 F.2c 91, 95 (CCPA 1958). The Court held that broadly providing an automatic or mechanical means to replace a manual activity which accomplished the same result is not sufficient to distinguish over the prior art. See also MPEP 2144.04.

Claim Objections

5. Claims 4 and 9-11 are objected to because of the following informalities:

Claim 4, 10 and 11 recites "recording substitution means one of." The examiner assumes -- recording substitution means configured to one of--.

Claim 9 discloses "substation." The examiner assumes "substation" to be -- substitution--.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kuroda (US 6,311,011) in view of Ellis et al (US 2003/0149988 and hereafter referred to as "Ellis").

Regarding Claim 1, Kuroda disclose a recording system for recording and/or reserving a program (Figure 1) and a recording substitution system for substitutionally recording a program (Figure 1), comprising:

means for accepting a request to record and/or reserve a program (Column 4, lines 18-50); local storage means for recording a program (Column 4, lines 18-50, Figure 2, 103, 105);

connection means for connecting with an external device (Column 4, lines 38-44, Column 5, lines 60-65); means for receiving a program (Figure 1, Figure 2);

determination means for determining a malfunction in the local storage means wherein the malfunction disables recording the program requested to be recorded and/or reserved on the local storage means or based on lack of storage space the storage means fails to record the program requested to be recorded and/or reserved (Column 5, lines 60-65);

means for issuing a recording substitution request to an external device for recording the program via the connection means in response to the determination means determining the malfunction in the local storage means (Figure 22, Figure 7). Kuroda discloses recording substitution means or the recorder/player for responding to reception of a recording substitution request via connection means and receiving and

recording a corresponding in the storage means (Column 5, lines 60-65, Figure 7).

Kuroda discloses the recording system or recording substitution system receives and records television programs in the storage means or the external device.

Kuroda is silent for connection means for connecting via a wide area network with an external device which is external to the recording system, means for issuing a recording request to the external device for recording the program via the wide network by the connection means.

In analogous art, Ellis discloses means for accepting a request to record and/or reserve a program (Page 6, paragraph 0084-0086, Figure 5); local storage means for recording the program (Page 6, paragraph 0086, Figure 7, 32, 31, 29); connection means for connecting via a wide area network with an external device which is external to the recording system (Page 6, paragraphs 0084, Page 4, paragraphs 0065, Figures 2c, 2d, 24, 20), means for issuing a recording request to the external device for recording the program via the wide network by the connection means (Page 6, paragraphs 0084-0085, Page 4, paragraphs 0065, Figures 2c, 2d, 24, 20). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Kuroda to include connection means for connecting via a wide area network with an external device which is external to the recording system (Page 6, paragraphs 0084, Page 4, paragraphs 0065, Figures 2c, 2d, 24, 20), means for issuing a recording request to the external device for recording the program via the wide network by the connection means (Page 6, paragraphs 0084, Page 4, paragraphs 0065, Figures 2c, 2d, 24, 20) as taught by Ellis in order to provide make it convenient for users

to play programs on demand instead of the users having to wait for a previously scheduled program to possibly repeat at a time scheduled by the provider (Page 1, paragraphs 0009-0011) as disclosed by Ellis.

Furthermore, in *KSR International Co. Teleflex Inc.*, 127 S.Ct 1727, No. 04-1350, slip. op. at 12 (2007), the Court found that if all the claimed elements are known in the prior art then one skilled in the art could have combined the elements as claimed by known methods with no change in their respective functions, and the combination would have yield predictable results to one of ordinary skill in the art at the time of the invention.

Regarding Claim 2, Kuroda and Ellis disclose all the limitations of Claim 1. Kuroda discloses the determination means generates a negative result when a remaining capacity of the storage means is not sufficient for recording a broadcast program requested to be recorded and/or reserved (Figure 7, Column 5, lines 60-65).

8. Claims 4-6 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kuroda in view of Ellis and Zigmond et al (US 6,698,020 and hereafter referred to as "Zigmond").

Regarding Claim 4, Kuroda disclose a recording system for recording and/or reserving a program (Figure 1) and a recording substitution system for substitutionally recording a program (Figure 1), comprising: means for accepting a request to record and/or reserve a program (Column 4, lines 18-50); storage means for recording a

program (Column 4, lines 18-50, Figure 2, 103, 105); connection means for connecting with external devices (Column 4, lines 38-44, Column 5, lines 60-65); means for receiving a program (Figure 1, Figure 2); recording substitution means for responding to the reception of a recording substitution request from at least one of the external devices via the connection means for receiving and recording means for issuing a recording substitution request to an external device for recording the program via the connection means (Figure 22, Figure 7).

Kuroda discloses recording substitution means or the recorder/player for responding to reception of a recording substitution request via connection means and receiving and recording a corresponding in the storage means (Column 5, lines 60-65, Figure 7). Kuroda discloses the recording system or recording substitution system receives and records television programs in the storage means or the external device, which necessarily includes commercials.

Kuroda is silent on user information management means for storing user information about each requesting origin, and obtaining advertising information appropriate for a user attribute of the requesting origin via the connection means and recording substitution means is configured to one of a) stores the advertising information in the storage means as an insert in a recorded program stored in the storage means in addition to original commercial information included in the recorded program and b) stores the advertising information as a substitute for the original information in the recorded program. Kuroda is silent for connection means for connecting via a wide area network with external devices which is external to the

recording system, means for issuing a recording request from at least one of the external devices via connection means for receiving and recording the program via the wide network by the connection means and for receiving and recording a program corresponding to the request in the storage means.

In analogous art, Ellis discloses means for accepting a request to record and/or reserve a program (Page 6, paragraph 0084-0086, Figure 5); local storage means for recording the program (Page 6, paragraph 0086, Figure 7, 32, 31, 29); connection means for connecting via a wide area network with external devices which is external to the recording system including remote media server for recording programs, television distribution facility for distributing television, program, advertisements, video and/or program guide data (Page 3, paragraph 0060, Page 4, paragraph 0064, 0066, 0069-0070, Figure 2c, 61, 24, Figure 2d, 61, 24), means for issuing a recording request from at least one of the external devices via connection means for receiving and recording the program via the wide network by the connection means and for receiving and recording a program corresponding to the request in the storage means (Page 6, paragraphs 0084-0086, Page 4, paragraphs 0065, Figures 2c, 2d, 24, 20).

In analogous art, Zigmond discloses connection means to external devices (Figure 4, 62, 66, Column 9, lines 39-55); user information management means for storing user information about each requesting origin (Figure 5, 82), and obtaining advertising information appropriate for a user attribute of the requesting origin from another external device or advertising source via the wide area network by the

connection means (Figure 5, Figure 6, Column 7, lines 9-12, Column 11, lines 31-65, Figure 4, 62, 66, Column 9, lines 39-55, Column 14, lines 4-6) and the recording substitution means or ad insertion device (Figure 5, 80, 86, 83, 82, 81). Zigmond discloses recording substitution portion (ad insertion device performing ad insertion via repository and switching unit) (Figure 5, Column 15, lines 24-27, 31-34) configure to one of a) stores the advertising information in the storage means as an insert in a recorded program stored in the storage means in addition to original commercial information included in the recorded program and b) stores the advertising information as a substitute (Column 15, lines 31-34) for the original information in the recorded program stored in the storage means (Column 7, lines 10-11, 13-20, Column 15, lines 31-34, Column 14, lines 1-12).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Kuroda to include connection means for connecting via a wide area network with external devices which is external to the recording system including remote media server for recording programs, television distribution facility for distributing television, program, advertisements, video and/or program guide data (Page 3, paragraph 0060, Page 4, paragraph 0064, 0066, 0069-0070, Figure 2c, 61, 24, Figure 2d, 61, 24), means for issuing a recording request from at least one of the external devices via connection means for receiving and recording the program via the wide network by the connection means and for receiving and recording a program corresponding to the request in the storage means (Page 6, paragraphs 0084-0086, Page 4, paragraphs 0065, Figures 2c, 2d, 24, 20) as taught by

Ellis in order to provide make it convenient for users to play programs on demand instead of the users having to wait for a previously scheduled program to possibly repeat at a time scheduled by the provider (Page 1, paragraphs 0009-0011) as disclosed by Ellis.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the combination to include user information management means for storing user information about each requesting origin (Figure 5, 82), and obtaining advertising information appropriate for a user attribute of the requesting origin from another external device or advertising source via the wide area network by the connection means (Figure 5, Figure 6, Column 7, lines 9-12, Column 11, lines 31-65, Figure 4, 62, 66, Column 9, lines 39-55) and the recording substitution means or ad insertion device (Figure 5, 80, 86, 83, 82, 81) and b) stores the advertising information as a substitute (Column 15, lines 30-33) for the original information in the recorded program stored in the storage means (Column 7, lines 10-11, 13-20, Column 16, lines 31-33, Column 14, lines 1-12) as taught by Zigmond in order to provide advertisements that are more interesting to the viewer for premium payment from the advertiser (Column 1, lines 23-35) as disclosed by Zigmond.

Furthermore, in *KSR International Co. Teleflex Inc.*, 127 S.Ct 1727, No. 04-1350, slip. op. at 12 (2007), the Court found that if all the claimed elements are known in the prior art then one skilled in the art could have combined the elements as claimed by known methods with no change in their respective functions, and the combination would

have yield predictable results to one of ordinary skill in the art at the time of the invention.

Regarding Claim 5, Kuroda, Ellis and Zigmond disclose all the limitations of Claim 4. Kuroda discloses when the recorder is connected with the Internet; the video recorder may store signals via World Wide Web in the temporary storage device (Column 12, lines 28-44). It is noted that the World Wide Web records data from a plurality of external devices (plurality of users) and the substitution means is located upstream from the user and records program per users' requests.

Regarding Claim 6, Kuroda, Ellis and Zigmond disclose all the limitations of Claim 4. Kuroda discloses comprising user information management means for storing user information about each requesting origin, wherein the recording substitution means records a broadcast program in a format appropriate for a user attribute of the requesting origin including HDD format, DVD format or VCR format (Figure 1, 105, Figure 7, Figure 22).

Regarding Claim 9, Kuroda disclose a recording substitution system for substitutionally recording a program (Figure 1), comprising:

receiving portion configured to receive a program (Figure 1, Figure 2);

storage portion configured to record a program (Column 4, lines 18-50, Figure 2, 103, 105);

connection portion configured to connect with external devices (Column 4, lines 38-44, Column 5, lines 60-65);

recording substitution portion configured to respond to the reception of a recording substitution request from at least one of the external devices via the connection means for receiving and recording means for issuing a recording substitution request to an external device for recording the program via the connection portion (Figure 22, Figure 7).

Kuroda discloses recording substitution means or the recorder/player for responding to reception of a recording substitution request via connection means and receiving and recording a corresponding in the storage means (Column 5, lines 60-65, Figure 7). Kuroda discloses the recording system or recording substitution system receives and records television programs in the storage means or the external device, which necessarily includes commercials.

Kuroda is silent for connection portion for connecting via a wide area network with external devices, means for responding to reception of a recording request from at least one of the external devices via connection means for receiving and recording the program via the wide network by the connection means. Kuroda is silent on recording substitution means is configured to one of a) stores the new advertising content, received from another external device, in the storage portion as a replacement for advertising content in the recorded program stored in the storage portion and b) store additional advertising content, received from the another external device, in the storage portion as an insert in the recorded program stored in the storage portion.

In analogous art, Ellis discloses means for accepting a request to record and/or reserve a program (Page 6, paragraph 0084-0086, Figure 5); local storage means for recording the program (Page 6, paragraph 0086, Figure 7, 32, 31, 29); connection means for connecting via a wide area network with external devices which is external to the recording system including remote media server for recording programs, television distribution facility for distributing television, program, advertisements, video and/or program guide data (Page 3, paragraph 0060, Page 4, paragraph 0064, 0066, 0069-0070, Figure 2c, 61, 24, Figure 2d, 61, 24), means for issuing a recording request from at least one of the external devices via connection means for receiving and recording the program via the wide network by the connection means and for receiving and recording a program corresponding to the request in the storage means (Page 6, paragraphs 0084-0086, Page 4, paragraphs 0065, Figures 2c, 2d, 24, 20).

In analogous art, Zigmond discloses connection means to external devices (Figure 4, 62, 66, Column 9, lines 39-55); user information management means for storing user information about each requesting origin (Figure 5, 82), and obtaining advertising information appropriate for a user attribute of the requesting origin from another external device or advertising source via the wide area network by the connection means (Figure 5, Figure 6, Column 7, lines 9-12, Column 11, lines 31-65, Figure 4, 62, 66, Column 9, lines 39-55, Column 14, lines 4-6) and the recording substitution means or ad insertion device (Figure 5, 80, 86, 83, 82, 81). Zigmond discloses recording substitution portion (ad insertion device performing ad insertion via repository and switching unit) (Figure 5, Column 15, lines 24-27, 31-34) is configured to

one of a) stores the new advertising content (in the advertisement repository) Column 15, lines 31-34), received from another external device (Figure 4, 62), in the storage portion as a replacement for advertising content in the recorded program stored in the storage portion (Column 15, lines 30-33, Column 7, lines 10-11, 13-20, Column 15, lines 31-34, Column 14, lines 1-12) and b) store additional advertising content, received from the another external device, in the storage portion as an insert in the recorded program stored in the storage portion.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Kuroda to include connection portion for connecting via a wide area network with external devices which is external to the recording system including remote media server for recording programs, television distribution facility for distributing television, program, advertisements, video and/or program guide data (Page 3, paragraph 0060, Page 4, paragraph 0064, 0066, 0069-0070, Figure 2c, 61, 24, Figure 2d, 61, 24), means for issuing a recording request from at least one of the external devices via connection means (Page 6, paragraphs 0084-0086, Page 4, paragraphs 0065, Figures 2c, 2d, 24, 20) as taught by Ellis in order to provide make it convenient for users to play programs on demand instead of the users having to wait for a previously scheduled program to possibly repeat at a time scheduled by the provider (Page 1, paragraphs 0009-0011) as disclosed by Ellis.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the combination to include recording substitution portion (Figure 1, 85, Column 15, lines 24-27, 31-34) is configured to one of a) stores

the new advertising content (in the advertisement repository) Column 15, lines 31-34), received from another external device (Figure 4, 62), in the storage portion as a replacement for advertising content in the recorded program stored in the storage portion (Column 15, lines 31-34, Column 7, lines 10-11, 13-20, Column 14, lines 1-12) as taught by Zigmond in order to provide advertisements that are more interesting to the viewer for premium payment from the advertiser (Column 1, lines 23-35) as disclosed by Zigmond.

Furthermore, in *KSR International Co. Teleflex Inc.*, 127 S.Ct 1727, No. 04-1350, slip. op. at 12 (2007), the Court found that if all the claimed elements are known in the prior art then one skilled in the art could have combined the elements as claimed by known methods with no change in their respective functions, and the combination would have yield predictable results to one of ordinary skill in the art at the time of the invention.

9. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kuroda in view of Lawler et al (US 5,805,763 and hereafter referred to as "Lawler").

Regarding Claim 8, Kuroda disclose a recording system for recording and/or reserving a program (Figure 1) and a recording substitution system for substitutionally recording a program (Figure 1, Figure 2), comprising: a request accept portion configured to accept a request to record and/or reserve a program (Column 4, lines 18-50); local storage portion for recording a program (Column 4, lines 18-50, Figure 2, 103, 105, Figure 9, 812); connection portion for connecting with an external device (Column

4, lines 38-44, Column 5, lines 60-65); means for receiving a program (Figure 1, Figure 2); determination portion for determining a malfunction in the local storage portion wherein the malfunction disable recording the program requested to be recorded and/or reserved on the local storage means or based on lack of storage space the storage means fails to record the program requested to be recorded and/or reserved (Column 5, lines 60-65); means for automatically issuing a recording substitution request to the external device for recording the program via the connection means in response to the determination portion determining the malfunction in the local storage portion (Figure 22, Figure 7). Kuroda discloses recording substitution means or the recorder/player for responding to reception of a recording substitution request via connection means and receiving and recording a corresponding in the storage means (Column 5, lines 60-65, Figure 7). Kuroda discloses that external storage devices can be numerous external storage devices (Figure 2, 105, Figure 9, 821-823, Column 8, lines 25-32). Kuroda discloses if a user selects a program to be recorded and the local storage device runs out of space, the program is automatically not deleted by being moved to the external storage device (Figure 22, Column 12, lines 16-24). Therefore, Kuroda does not explicitly disclose automatically issuing recording request to an external storage device. Kuroda is silent for connection means for connecting via a wide area network with an external storage device which is external to the recording system, issue portion automatically issuing a recording request to the external storage device for recording the program via the wide network by the connection means.

In analogous art, Lawler discloses means for accepting a request to record and/or reserve a program (Column 12, lines 29-31, 58-61); local storage means for recording the program (Figure 2, 23); connection means for connecting via a wide area network with an external storage device which is external to the recording system (Column 5, lines 28-31, Figure 1, 14, Column 12, lines 29-31, 58-61, Column 13, 8-12, 26-36), issue portion for automatically issuing a recording request to the external storage device for recording the program via the wide network by the connection means (Column 12, lines 29-31, 58-61, Column 13, 8-12, 26-36). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Kuroda to include means for accepting a request to record and/or reserve a program (Column 12, lines 29-31, 58-61); local storage means for recording the program (Figure 2, 23); connection means for connecting via a wide area network with an external storage device which is external to the recording system (Column 5, lines 28-31, Figure 1, 14, Column 12, lines 29-31, 58-61, Column 13, 8-12, 26-36), issue portion for automatically issuing a recording request to the external storage device for recording the program via the wide network by the connection means (Column 12, lines 29-31, 58-61, Column 13, 8-12, 26-36) as taught by Lawler in order to provide allow users to access a single recorded program (Column 13, 8-12, 26-36) as disclosed by Lawler.

Furthermore, in *KSR International Co. Teleflex Inc.*, 127 S.Ct 1727, No. 04-1350, slip. op. at 12 (2007), the Court found that if all the claimed elements are known in the prior art then one skilled in the art could have combined the elements as claimed by

known methods with no change in their respective functions, and the combination would have yield predictable results to one of ordinary skill in the art at the time of the invention.

10. Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kuroda in view of Ellis, as applied to Claim 1, further in view of Zigmond.

Regarding Claim 10, Kuroda and Ellis disclose all the limitations of Claim 1. Kuroda discloses receiving and recording television programs in the storage means or the external device, which necessarily includes commercials. Ellis discloses connection means for connecting via a wide area network with external devices which is external to the recording system (Page 3, paragraph 0060, Page 4, paragraph 0064, 0066, 0069-0070, Figure 2c, 61, 24, Figure 2d, 61, 24), means for issuing a recording request from at least one of the external devices via connection means for receiving and recording the program via the wide network by the connection means and for receiving and recording a program corresponding to the request in the storage means (Page 6, paragraphs 0084-0086, Page 4, paragraphs 0065, Figures 2c, 2d, 24, 20). Ellis discloses external device includes user information management means (Page 6, paragraph 0082). Kuroda and Ellis is silent on a recording medium obtaining advertising information appropriate for a user attribute of the requesting origin via the connection means and one of a) inserts the advertising information in a recorded program stored in the storage means in addition to original commercial information

included in the recorded program and b) substitutes the advertising information for the original information in the recorded program.

In analogous art, Zigmond discloses any recording medium comprising recording substitution means obtaining advertising information appropriate for a user attribute of the requesting origin by the connection means (Figure 5, Figure 6, Column 7, lines 9-12, Column 11, lines 31-65, Figure 4, 62, 66, Column 9, lines 39-55). Zigmond discloses recording substitution means (ad insertion device performing ad insertion via repository and switching unit) (Figure 5, Column 15, lines 24-27, 31-34) configured to one of a) inserts the advertising information in a recorded program in addition to original commercial information or any commercials that an advertiser can specify to be shown during a particular program and only some commercials have to be replaced in a recorded program so inserting new commercials to original commercials with the recorded program (Column 14, lines 1-12, Column 12, lines 54-59) included in the recorded program interpreted which is met by some commercials or advertisements are overwritten based on timewise data (Column 14, lines 1-12) and b) replacing or substituting for the original commercial information included in the recorded program (Column 14, lines 1-12). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to combine Zigmond to include any recording medium comprising recording substitution means obtaining advertising information appropriate for a user attribute of the requesting origin by the connection means (Figure 5, Figure 6, Column 7, lines 9-12, Column 11, lines 31-65, Figure 4, 62, 66, Column 9, lines 39-55) and one of a) inserting into the recorded program (Figure 5,

Figure 6, Column 7, lines 9-12, Column 11, lines 31-65) in addition to original commercial information or any commercials that an advertiser can specify to be shown during a particular program included in the recorded program some commercials or advertisements are overwritten based on timewise data (Column 14, lines 1-12, Column 12, lines 54-9) and b) replacing or substituting for the original commercial information included in the recorded program (Column 14, lines 1-12) to the external device (any recording medium) of the combination of Ellis and Kuroda in order to provide advertisements that are more interesting to the viewer for premium payment from the advertiser (Column 1, lines 23-35) as disclosed by Zigmond.

Furthermore, in *KSR International Co. Teleflex Inc.*, 127 S.Ct 1727, No. 04-1350, slip. op. at 12 (2007), the Court found that if all the claimed elements are known in the prior art then one skilled in the art could have combined the elements as claimed by known methods with no change in their respective functions, and the combination would have yield predictable results to one of ordinary skill in the art at the time of the invention.

11. Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kuroda in view of Lawler as applied to Claim 8, further in view of Zigmond.

Regarding Claim 11, Kuroda and Lawler disclose all the limitations of Claim 8. Kuroda discloses receiving and recording television programs in the storage means or the external device, which necessarily includes commercials. Lawler discloses connection means for connecting via a wide area network with an external storage

device which is external to the recording system (Column 5, lines 28-31, Figure 1, 14, Column 12, lines 29-31, 58-61, Column 13, 8-12, 26-36), issue portion for issuing a recording request to the external storage device for recording the program via the wide network by the connection means (Column 12, lines 29-31, 58-61, Column 13, lines 8-12, 26-36). Lawler discloses external device includes user information management means (Column 13, lines 8-12, 26-36). Kuroda and Lawler is silent on a recording medium obtaining advertising information appropriate for a user attribute of the requesting origin via the connection means and one of a) inserts the advertising information in a recorded program stored in the storage means in addition to original commercial information included in the recorded program and b) substitutes the advertising information for the original information in the recorded program.

In analogous art, Zigmond discloses any recording medium comprising recording substitution means obtaining advertising information appropriate for a user attribute of the requesting origin by the connection means (Figure 5, Figure 6, Column 7, lines 9-12, Column 11, lines 31-65, Figure 4, 62, 66, Column 9, lines 39-55). Zigmond discloses recording substitution means (ad insertion device performing ad insertion via repository and switching unit) (Figure 5, Column 15, lines 24-27, 31-34) configured to one of a) inserting the advertising information in a recorded program in addition to original commercial information or any commercials that an advertiser can specify to be shown during a particular program and only some commercials have to be replaced in a recorded program so inserting new commercials to original commercials with the recorded program (Column 14, lines 1-12, Column 12, lines 54-59) included in the

recorded program interpreted which is met by some commercials or advertisements are overwritten based on timewise data (Column 14, lines 1-12) and b) replacing or substituting for the original commercial information included in the recorded program (Column 14, lines 1-12). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to combine Zigmond to include any recording medium comprising recording substitution means obtaining advertising information appropriate for a user attribute of the requesting origin by the connection means (Figure 5, Figure 6, Column 7, lines 9-12, Column 11, lines 31-65, Figure 4, 62, 66, Column 9, lines 39-55) and one of a) inserting into the recorded program (Figure 5, Figure 6, Column 7, lines 9-12, Column 11, lines 31-65) in addition to original commercial information or any commercials that an advertiser can specify to be shown during a particular program included in the recorded program some commercials or advertisements are overwritten based on timewise data (Column 14, lines 1-12, Column 12, lines 54-9) and b) replacing or substituting for the original commercial information included in the recorded program (Column 14, lines 1-12) to the external device (any recording medium) of the combination of Lawler and Kuroda in order to provide advertisements that are more interesting to the viewer for premium payment from the advertiser (Column 1, lines 23-35) as disclosed by Zigmond.

Furthermore, in *KSR International Co. Teleflex Inc.*, 127 S.Ct 1727, No. 04-1350, slip. op. at 12 (2007), the Court found that if all the claimed elements are known in the prior art then one skilled in the art could have combined the elements as claimed by known methods with no change in their respective functions, and the combination would

have yield predictable results to one of ordinary skill in the art at the time of the invention.

Conclusion

12. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to FARZANA HOSSAIN whose telephone number is (571)272-5943. The examiner can normally be reached on Monday-Friday 8:00 am to 4:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christopher Kelley can be reached on 571-272-7331. The fax phone

number for the organization where this application or proceeding is assigned is 571-273-8300.
